

## **Sticker Application Instructions**

If you are having difficulty getting your stickers aligned or you are getting air bubbles trapped behind the sticker; try this effective industry solution:

1. Fill a spray bottle (window cleaner spray bottle or similar) with soapy water (1 part fairy liquid to 2 parts water).
2. Spray the adhesive side of the label and the surface of the bin (ensure the bin is clean)
3. Position the sticker (it should be very easy to move the sticker about and get rid of bubbles)
4. Finally use a squeegee or ruler to squeeze out any bubbles or soap solution from behind the sticker.
5. Leave to dry.
